

Dgenex- A commission free cryptocurrency exchange with its own cryptocurrency DGX token.

Our Vision

A Cryptocurrency Exchange for many not for Few

We are building a highly liquid and decentralized cryptocurrency Exchange where traders don't pay fees of any kind. We believe that fee free and secure trading is key for cryptocurrencies survival.

The Dgenex Exchange

The Dgenex provides a zero transaction fees buying and selling platform for digital currencies. The exchange does not hold any client funds, combining the security of decentralized account balances with the speed and reliability of a centralized servers.

Business Model

By creating an ERC-20 compatible protocol token on the Ethereum blockchain, called the DGX token, and using it as the Dgenex Exchange's native currency, the exchange can eliminate transaction fees on trades and cover costs by creating new tokens instead of charging fees. The relatively small inflation cost of creating extra tokens is more than offset by the demand that is created by traders who must own DGX tokens to participate in the commission-free, liquid markets that are created by this model.

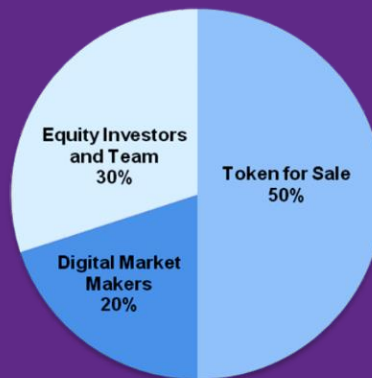

DGX Token

DGX token is the native cryptocurrency of the Dgenex Exchange. DGX is an ERC-20 smart contract token built on Ethereum Blockchain.

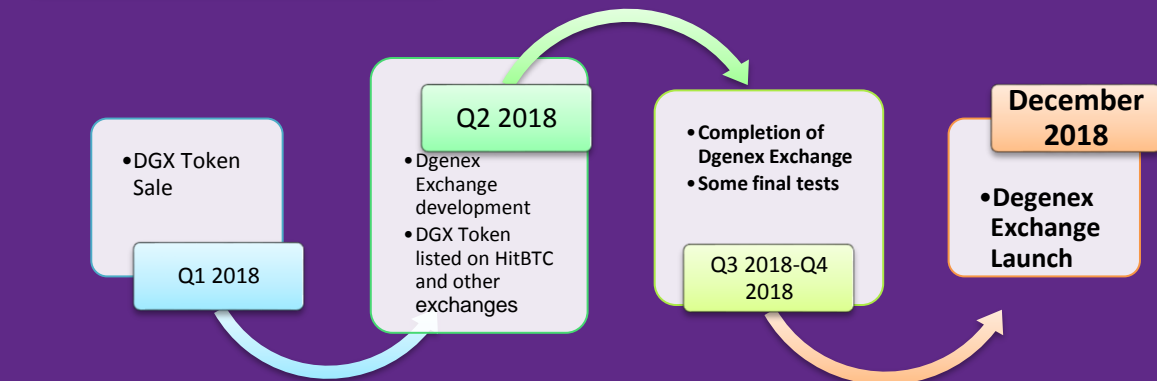

Important Numbers

- DGX tokens created- 10,000,000,000
- DGX Tokens Available for sale- 5,000,000,000
- DGX token price per unit- \$0.01

Token Distribution

Sale Proceeds Allocation
